Go Power! Charging Kits Why choose a Go Power! System

A Go Power!™ Solar Charging Kit keeps your batteries charged and healthy. Full batteries give you the freedom to run lights, furnaces, fans and more DC appliances without the worry of running out of power.

Watch TV, DVDs, play video games - with healthy batteries you don't have to give up the comforts you are used to wherever you choose to stay.

The rugged durability of our solar panels guarantee you'll generate solar power everywhere you go. All the components you need to set up your solar charging system are included in every GoPower!™ Solar Charging Kit.

Solar panels are mounted securely, and without worry of leaks, with the provided mounting hardware. To maximize power, the optional ARM-UNI Mounts, which tilt and adjust a full 180 degrees when you are parked, can be added to your system and offer up to 40% more charging power.

Go Power!™ Solar Charging Kits are maintenance free and designed to give you decades of uninterrupted power.

Kits come with our own premium Go Power!™ 25 amp digital charge controller. The GP-PWM-25 digital regulator monitors your system to prevent over charging your batteries. As well, it delivers vital information where and when you need it.

Go Power!™ Solar Charging Kits are maintenance free and designed to give you decades of uninterrupted power.

Other features of the GP-PWM-25 controller are:

- 5 year warranty.
- Easy to install, flush mountable design.
- Digital display of battery voltage at a glance.
- Digital display of power output from the solar panel (amps).
- Expandible (allows for more solar with the same regulator).
